Chemical safety limits

Dear sir/madam,

We would like to take this opportunity to inform you of our actions and the status as regards REACH (EG/1097/2006), RoHS (2011/65/EU) and industry-specific regulations, and to comply with our information obligations within the supply chain pursuant to REACH Article 33.

With regard to the product **art.no. 284.02.043** we supply to you, what is relevant is that they not contain any hazardous chemicals. We have implemented a check procedure to ensure that all chemical information is up to date. We are maintaining close contact and communication with our suppliers to ensure that we receive information early in the event a hazardous chemical is present. The information we request is primarily in response to the most recent legal requirements. We also collect industry-specific information and other information beyond what is legally required so that we are prepared to implement required substitutions as quickly as possible.

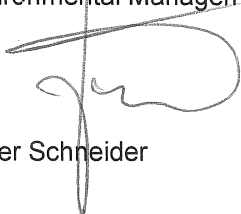

With regard to our own production, we are certified under DIN ISO 9001 and 14001 and our products are manufactured in controlled processes. Our chemicals management ensures that no products in our facilities are contaminated with hazardous substances.

We have currently not received any information from suppliers to the effect that any of our products contain hazardous materials and have no reason to suspect that this is the case. Of course, we will inform you immediately should we receive any such information. And in that case, we would swiftly work to implement substitutions.

If you have any additional questions about chemical safety, please do not hesitate to contact the undersigned.

Best regards
Head of Quality and
Environmental Management

i. V.

Oliver Schneider
